CASE STUDY | PERFORMANCE

D2C Skincare Brand

Started with a full-funnel audit of Google Ads and Meta Ads, then rebuilt campaign structure by intent stage, tightened tracking, and aligned landing pages with product objections, trust cues, and offer clarity.

3.2x BLENDED ROAS IN 120 DAYS

CATEGORY

Performance

TIMELINE

120 days

HEADLINE RESULT

3.2x

Objective

Increase profitable new-customer acquisition without forcing unsustainable ad spend, and establish a repeatable performance system that can scale predictably.

Engagement Scope

- Google Ads and Meta Ads Management
- E-Commerce Advertising and ROAS Optimization
- Website Design and Website Development

Approach

- Rebuilt Google Ads and Meta Ads account architecture by funnel stage and audience role.
- Implemented weekly creative testing loops with clear pass/fail thresholds for scale decisions.
- Mapped ad promise to landing page sections so every click encounters offer relevance and trust proof.
- Introduced dashboard-led budget reviews so scale decisions were based on marginal efficiency instead of headline ROAS alone.

Execution Timeline

Phase 1: Diagnostic Baseline

WEEKS 1-2

Full-funnel audit, pixel and event validation, leakage analysis by campaign and audience.

Phase 2: System Rebuild

WEEKS 3-6

Campaign and audience restructuring, creative test matrix, landing page alignment updates.

Phase 3: Scale Governance

WEEKS 7-17

Budget reallocation by marginal efficiency, weekly decision cadence, and expansion controls.

Before

- Prospecting and retargeting audiences heavily overlapped, inflating CPM and frequency.
- Creative decisions were based on preference instead of a structured testing cadence.
- Landing pages did not match ad intent, creating drop-off between click and checkout.
- Leadership could not see which campaigns were truly creating profitable first-purchase volume.

After

- Blended ROAS improved from 1.1x to 3.2x while monthly spend scaled with guardrails.
- Cost per first purchase dropped by 38% through audience hygiene and placement controls.
- Checkout conversion rate improved from 1.6% to 2.9% after message-to-page alignment.
- Weekly decision reviews linked creative, landing, and spend changes to margin-aware growth outcomes.

Business Impact

- Performance budgets moved from reactive spend to governed growth investment.
- Acquisition profitability improved while preserving room for controlled scaling.
- Leadership gained weekly decision visibility across channel, creative, and landing performance.
- The account moved from campaign firefighting to a controlled scale system with clearer unit economics.

Performance Lift Snapshot
