

CASE STUDY | OPERATIONS

B2B Distribution Network

Fernesta redesigned the network's lead intake, approval routing, reporting dashboards, and sales handoff rules so inbound demand no longer stalled inside manual spreadsheet chasing and fragmented follow-up.

72% FASTER LEAD-TO-QUOTE TURNAROUND

ENGAGEMENT TIMELINE: 12 WEEKS

TIMELINE

12 weeks

HEADLINE RESULT

72%

Objective

Reduce operational leakage between lead capture and quotation by building one visible workflow system for intake, approvals, ownership, and weekly reporting.

Engagement Scope

- Workflow Automation and Reporting Systems
- Website Design and Website Development
- Google Ads and Meta Ads Management

Approach

- Mapped the full lead-to-quote workflow to identify approval bottlenecks, duplicated data entry, and missing ownership points.
- Built standardized intake structure, routing logic, and status dashboards so each enquiry had a visible next action.
- Connected landing forms, tracker updates, and follow-up triggers to reduce manual handoffs across marketing and sales.
- Introduced weekly governance reviews using workflow data instead of anecdotal status updates.

Execution Timeline

Phase 1: Workflow Mapping

WEEKS 1-2

Current-state mapping, bottleneck discovery, and ownership gap identification.

Phase 2: System Buildout

WEEKS 3-6

Intake standardization, status logic, approval routing, and dashboard implementation.

Phase 3: Team Adoption

WEEKS 7-9

Usage training, exception handling, and accountability cadence rollout.

Phase 4: Optimization

WEEKS 10-12

Workflow tuning, response-time governance, and reporting refinement.

Before

- Lead capture and quoting depended on fragmented spreadsheets with inconsistent field quality.
- Approvals and task ownership lived in chat threads, creating delay and accountability gaps.
- Sales and marketing could not see where active enquiries were stuck without manual follow-up.
- Reporting focused on total leads rather than response discipline and operational throughput.

After

- Inbound enquiries moved through one intake and routing structure with clearer ownership by stage.
- Approval status and next actions became visible through a shared reporting dashboard.
- Follow-up discipline improved because reminder logic and exception flags reduced manual chasing.
- Lead-to-quote turnaround improved by 72% while the handoff between teams became easier to govern.

Business Impact

- Commercial response became faster without increasing management overhead.
- Leadership gained a clearer operating view of lead volume, delay points, and conversion friction.
- Workflow automation reduced avoidable leakage between marketing demand and quoted opportunities.
- The business retained a reusable operating model for future campaign scale and multi-owner coordination.
